A major breakthrough in air abrasion systems!

After years of development Danville has done it again!

The PrepAir is a handheld air abrasion unit with unmatched performance. The finger button control gives instantaneous on/off response and eliminates the need for a foot pedal. Abrasive flow is even and set to a minimum, to greatly reduce over-spray. Interchangeable nozzles rotate 360° assuring proper reach from any angle. Hook up is easy as the PrepAir will connect to a MicroEtcher™ disconnect, high-speed outlet or numerous other air connections.

PrepAir
