

PerfectIM® Systems

VINYL POLYSILOXANE IMPRESSION MATERIALS

PerfectIM Systems

PerfectIM offers reliable performance and the ability to create accurate dental impressions without the need for inconvenient, uncomfortable retraction cord. Because these materials are hydrophobic, they will displace fluids, eliminating the need to air dry. Precise, easy to work with, and available in a variety of working/setting times, PerfectIM is ideal for bite registrations, dentures, crowns, bridges, veneers, inlays, onlays, and nightguards.

Perfect Impressions, No Cord!

The H&H (Hydraulic & Hydrophobic) cordless technique can easily save you an average of 15 minutes per “crown & bridge” appointment, while producing exceptionally accurate results. It is a two step system which eliminates the time consuming task of packing retraction cord, and therefore any possible post traumatic discomfort.

H&H Cordless Technique

To order a demonstration DVD of this revolutionary technique call, 888-JMORITA (566-7482). To view the demonstration online, visit our website at www.jmoritausa.com/perfectim.

Features and Benefits

- Vinyl Polysiloxane - displaces fluids
- Thixotropic (Except SnoWhite)
- Radiopaque
- Cartridge dispensed
- Immersible in aqueous disinfectants
- Taste and odor free
- “Highly recommended” by The Dental Advisor in an evaluation study

To order, or for more information, call 888-JMORITA (566-7482) or contact your dealer.

No Doubt About A Bite®

The PerfectIM Systems 30 Second Blue Velvet has a whipped cream texture, which eliminates running, dripping, and gagging. It is the ideal material for bite registrations, producing fast, extremely accurate interocclusal records. The high durometer (80) of 90 Second Blue Velvet produces a hard, plaster-like set and eliminates the need for retraction cord when used with Flexi-Velvet or SnoWhite in the H&H cordless technique. As a second step companion to Blue Velvet, Flexi-Velvet can be used to capture perfect margins. SnoWhite can also be used as a second step in this technique; it is an extremely fluid material and is recommended for normal sulcus depth crown and bridge impressions, as well as for inlay and onlay impressions. 90 Second SnoWhite is also recommended for denture relines and as a final wash for denture impressions. Peel-Away Die Spacer is designed for use on dies produced from H&H impressions; it is easily removed and a final check for fit can be made on the original clean die.

Replacements

Single Phase Body can be used as a replacement for Impregum™. Final Wash can be used as a replacement for Permadyne™.

Ordering Information

Cartridge Kits

Each kit contains (3) 50ml cartridges and 12 mixing tips
